

# mercury retrograde

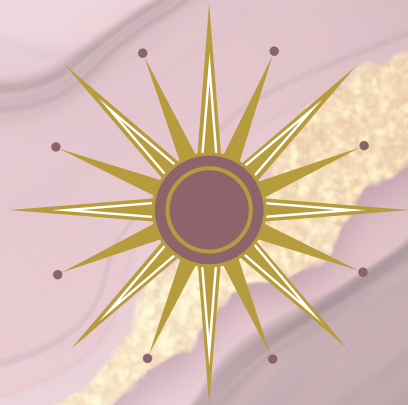

x Wendy Barla

**"The key to dealing with a Mercury Retrograde is the prefix "Re" as in rethink, rebook, rearrange, repair, rewrite... you get the idea!"**

29th May – 22nd June

This Saturday, May 29th, Mercury goes Retrograde and appears to go backwards across the sky for about 3 weeks. We call this period a "Mercury Retrograde". Of course, Mercury does not really go backwards. Depending upon the relative orbital positions of the Earth and Mercury with respect to the Sun, Mercury only appears to be moving backward.
